

Silent Socks® – a simple way of reducing room noise

- *Much quieter:* Silent Socks are acoustic socks that reduce the noise in a room by up to 18 dB compared with the original leg pads. A reduction of just 8-10 dB is experienced as a halving of the noise level.
- *Lighter and less wear & tear:* With Silent Socks the chair or table glides easily, which means you avoid scraping sounds, floor scratches or heavy lifts. Also, Silent Socks dampen the sound of 'collisions' between for instance chair and table.
- *Tested quality that can stand tough handling:* Silent Socks have been tested in Sweden both by the SP Technical Research Institute and in the sound lab at noise reduction specialists Akustikverkstan.
- *Four sizes:* Silent Socks come in four sizes that fit steel tube legs Ø 16-22 / Ø 20-27 mm and Ø 28-35 / Ø 33-38 mm. Original plastic pads should not be removed.
- *Washable:* Silent Socks may be both machine-washed and spin-dried (wool programme 30-40°).

- *Simple fitting:* No tools required. Nor do the original pads have to be removed when fitting Silent Socks. Silent Socks fit securely, thanks to structural support inside the sock.
- *Production:* Silent Socks are made in Sweden.
